Current Population Survey: Annual Social and Economic (ASEC) Supplement Survey, 2015 Codebook Notes

VARIABLES

ICPSR added the variable CASEID which uniquely identifies each case.

DATA FORMAT

The original data did not contain FILLER variables as indicated in the Basic CPS and Supplement Record Layout located in the Data Dictionary in the User Guide. As a result, the column locations in the codebook and any ICPSR-released data product will have column locations that are not consistent with locations described in the User Guide.

ICPSR adjusted variable widths for efficiency.

UNDOCUMENTED CODES

Undocumented codes are labeled as such by ICPSR.

For a complete listing of valid codes, please refer to the Record Layout within the Data Dictionary section of the User Guide.

VALUE LABELS

Extremely long value labels may be truncated for some variables. Please refer to the Record Layout within the Data Dictionary section of the User Guide for complete value labels.

Some value labels were truncated in the original data file. Value labels were expanded using information from the Record Layout where appropriate.

When value labels were not provided in the data documentation, ICPSR staff reviewed previous waves of the Current Population Survey and added labels from those wave as was appropriate.

Missing values were declared according to the ICPSR standard procedures.

The variable **CARE_VAL** contains duplicate value labels for some values. Users may use their discretion of whether to manipulate the data for their own analysis.

VARIABLE LABELS

Many variable labels were truncated in the original data file. Thus, variable labels were expanded using information from the Record Layout within the Data Dictionary section of the User Guide for complete value labels.

WEIGHT VARIABLES

ICPSR merged the replicate weight variables associated with this dataset to the end of the data file. In addition, the following weight variables are present in the file:

HSUP_WGT	March supplement household weight
FSUP_WGT	Householder or reference person weight
A_FNLWGT	Final weight
A_ERNLWT	Earnings/not in labor force weight (2 implied decimal places)
MARSUPWT	Supplement final weight (2 implied decimal places)

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
